

ABSTRACT

Provided a patch activated in use capable of uniformly activating a drug by supplying a solution when used.

5 The patch activated in use comprises an absorber 11 containing a dry drug 10 and formed of a material capable of absorbing a liquid, a wall material 13 arranged around the absorber 11 and having an adhesive layer 12 on the lower surface thereof, a support 15 arranged on the absorber 11 and the wall 10 material 13 and having an opening 14 at the center, a diaphragm 20 arranged on the support 15, and a dissolution liquid reservoir 18 arranged on the diaphragm 20, holding a dissolution liquid dissolving the drug in a space with the diaphragm 20 and having a protruding portion 17 which breaks the diaphragm 20 by pressure.

15 The protruding portion 17 has a liner 19 at its top end and arranged in contact or in the proximity with the diaphragm 20. A liner 19 is detachably provided on the lower surface of the absorber 11 and adhesive layer 12.
